SKILLS

- JavaScript
- HTML
- CSS
- React.js | React
- Git
- Docker
- UI/UX
- Java
- Python
- C#
- SQL
- React Native
- Node.js | Node
- TypeScript
- Express.js | Express
- PyTorch
- TensorFlow
- RESTful APIs
- Unity
- Postman
- Web Design
- Full stack project management

EDUCATION

Bachelor of Science: Software Engineering, 06/2026
TED University - Ankara

Master of Science: Applied Informatics || Software Engineering, 09/2026 - Present
CVUT - Czech Republic

LANGUAGES

English
Fluent
IELTS Overall 8.0

Russian
Fluent

Azerbaijani
Native

Turkish
Advanced

Czech
Beginner

CERTIFICATIONS AND LICENCES

Full Stack Developer Path - Scrimba

PROFESSIONAL SUMMARY

Full-stack and JavaScript Developer experienced in building responsive React user interfaces, writing efficient code, and handling inputs and errors properly. Skilled in JavaScript, HTML, CSS, Git, and Docker, with a strong focus on agile development and user-facing web solutions.

WORK HISTORY

Full stack developer 2025 - Present
Eco-cash - Baku, Azerbaijan
As a Full-Stack Developer, I played a pivotal role in engineering a scalable full-stack event platform using React, Node.js, and SQLite. My work primarily focused on architecting a high-performance backend, developing core ticketing and event discovery features, implementing secure JWT authentication, integrating payment gateways, and building dedicated administrative tooling.

- **Full-Stack Event Platform Architecture (React, Node.js, SQLite):** Engineered and launched a comprehensive event platform, driving a 40% increase in user engagement and ensuring smooth feature deployments with minimal downtime and zero critical regressions.
- **Developed and optimized RESTful APIs** connecting the React front end, Node.js back end, and SQLite database, achieving 99.9% uptime.
- **High-Performance Database Architecture (SQLite WAL):** Architected a single-server, read-heavy production backend utilizing SQLite configured in WAL mode, achieving 100% elimination of network database latency and 99.9% sub-millisecond query response consistency.
- **Secure Authentication & Authorization (JWT):** Implemented robust user authentication and input validation frameworks via RESTful APIs and JSON Web Tokens (JWT), ensuring proper error handling and securing 100% of active user sessions with a 0% vulnerability rate.
- **Payment Gateway Integration (epoint.az):** Integrated the epoint.az payment gateway into the platform, achieving a 99.8% successful transaction rate and boosting checkout conversion by 120%.
- **UI/UX Wireframing & Prototyping:** Designed intuitive user interfaces and end-to-end user flows for the event platform, reducing bounce rates by 15% and increasing user interaction efficiency by 35%.
- **Cross-Platform Responsive Design:** Engineered responsive layouts optimized for desktop and mobile devices, ensuring a seamless, responsive user experience across diverse desktop and mobile viewports and increasing mobile user retention by 30%.
- **Administrative Ticket Validation Tool:** Designed and developed an intuitive internal tool for administrators, achieving a 90% reduction in ticket verification time and ensuring 100% validation accuracy.

Undergraduate Professor Assistant 2025 - 2026
TED University - Ankara, Turkey
As an Undergraduate Teaching Assistant, I played a pivotal role in co-teaching deep learning and driving academic excellence through curriculum design and student evaluation. My work primarily focused on independently delivering specialised guest lectures on neural network architectures, designing stress-tested assignments and technical grading rubrics, and collaborating with faculty to streamline course delivery and track student progression.

- **Co-taught undergraduate deep learning course**, delivered lectures on neural networks, designed assignments and rubrics to enhance student understanding.
- **Designed and stress-tested programming assignments** and technical grading rubrics to ensure accurate evaluation of student performance.
- **Curriculum Streamlining & Academic Tracking:** Collaborated with the lead professor to streamline curriculum delivery, optimise course materials, and assess undergraduate academic progression.

Front-End Developer 2023 - 2025
Esayar - Baku, Azerbaijan
Engineered and scaled Ebaz cross-platform mobile application with React Native, enabling seamless access to over 5,000 active real estate/automotive listings.

- **Advanced Search & Discoverability Optimisation:** Designed and implemented high-performance search and filtering features, dramatically improving content discoverability and overall user experience for thousands of daily active users.
- **Secure Authentication & Real-Time Data Synchronisation:** Integrated robust user authentication workflows and real-time data synchronisation layers via RESTful APIs, ensuring reliable state management and data consistency across API interactions.
- **AI-Driven Conversational Chatbot Engineering:** Built an interactive, low-latency conversational chatbot utilising Gemini 2 Flash, enabling natural language processing and intuitive conversational interfaces within the mobile application.
- **Integrated AI chatbot with backend REST APIs** to enhance data retrieval efficiency and security.
- **Streamlined API contract handoffs** and collaborated closely with backend developers in an agile environment, writing efficient JavaScript code to accelerate feature delivery cycles by 20%.
